DETAILED ACTION

Election/Restrictions

1. Applicant's election with traverse of group I in the reply filed on August 23, 2004 is acknowledged. The traversal is on the ground(s) that the PCT application did not lack unity and the requirement of a reference showing the special technical features. This is not found persuasive because groups I-III did not possess the same special technical feature. This conclusion was also made by the PCT examiner (page 2, lines 1-10 of the translated PCT action). Although that examiner inexplicably continued to examine all three separate inventions, this application will be limited to only the elected group. Regarding the use of references, applicant is invited to point out where in the MPEP this is stated.

The requirement is still deemed proper and is therefore made FINAL.

2. Claims 11-24 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected groups, there being no allowable generic or linking claim.

Double Patenting

3. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970);and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double

Application/Control Number: 09/980,494

Art Unit: 1761

Page 3

patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

4. Claims 1-10 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-15 of copending Application No. 10/450,781. It would have been obvious to one of ordinary skill in the art that the claimed casing of 10/450,781 was also "breathable" since it was also made from polyether chains.

This is a <u>provisional</u> obviousness-type double patenting rejection.

Specification

5. The disclosure is objected to because of the following informalities: the specification lacks section headings such as "Summary of the Invention".

Appropriate correction is required.

Claim Rejections - 35 USC § 112

- 6. The following is a quotation of the second paragraph of 35 U.S.C. 112:

 The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 7. Claims 2, 4-7, and 9-10 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Application/Control Number: 09/980,494

Art Unit: 1761

8. Claim 2 recites " $2.000 - 20.000 \, \text{g/m}^2/24$ ". It is not clear what measurement "24" represents. It is not clear whether the range should 2-20, or 2,000-20,000. For examination purposes, it will be assumed that the limitation should read " $2,000 - 20,000 \, \text{g/m}^2/24\text{hr}$ ".

Page 4

- 9. Regarding claims 4-5, the phrase "preferably" renders the claim indefinite because it is unclear whether the limitations following the phrase are part of the claimed invention. See MPEP § 2173.05(d).
- 10. Claims 6 and 9 recite "it". It is not clear what "it" is.
- 11. Claim 7 recites "other gases". It is not clear what gases would be considered "other".
- 12. Claim 10 recites "salami-type sausage". It is not clear what kinds of sausage would qualify as being considered "salami-type".

Claim Rejections - 35 USC § 102

13. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 14. Claims 1-10 are rejected under 35 U.S.C. 102(e) as being anticipated by Frey et al [Pat. No. 5,840,807].

Art Unit: 1761

Frey et al teach a casing comprising a thermoplastic polymer with polyether chains (2, line 42), a MVTR of 2,000-20,000 g/m²/24hr (column 6, Table 1), polyamide and polyether blocks (abstract), Nylon-12 (column 2, line 16), polyethylene glycol (column 2, line 41), the polyamide having a molar mass of 300-15,000 (column 2, line 16), the polyether having a molar mass of 100-6,000 (column 2, line 20), the casing inherently being permeable to smoke, CO2, O2, and other gases, the casing inherently being impermeable to microbes, the casing inherently being smokeable, the casing inherently being resistant to deterioration by cellulolytic enzymes, and the casing inherently being curvable. Phrases such as "for dry sausages" and "salami-type sausages" are merely preferred methods of using the claimed product. A recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim. In a claim drawn to a process of making, the intended use must result in a manipulative difference as compared to the prior art. See In re Casey, 152 USPQ 235 (CCPA 1967) and In re Otto, 136 USPQ 458, 459 (CCPA 1963). A preamble is generally not accorded any patentable weight where it merely recites the purpose of a process or the intended use of a structure, and where the body of the claim does not depend on the preamble for completeness but, instead, the process steps or structural limitations are able to stand alone. See In re Hirao, 535 F.2d 67, 190 USPQ 15 (CCPA 1976) and Kropa v. Robie, 187 F.2d 150, 152, 88 USPQ 478, 481 (CCPA 1951).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Drew E Becker whose telephone number is 571-272-1396. The examiner can normally be reached on Mon.-Thur. 8am-5pm and every other Fri. 8am-4pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Milton Cano can be reached on 571-272-1398. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
